Implementation Description:
This code can be used to monitor a database of students' names, ages, majors, and GPAs, by sorting them by ID numbers. Data from this database can then be used to create graphs to visualize differences such as, between age ranges in different majors and, the difference in GPA between specific majors.

Running Instructions:
Download all provided files into Matlab, open them all, and run the Main.m, and the graphs below will populate.

Visualizations:
